SUMMARY

Dedicated and detail-oriented Full Stack Developer with 4 years of experience in designing, developing, and deploying scalable web applications using Java and contemporary front-end technologies. Well-versed in both backend and frontend development, with a strong emphasis on writing clean, maintainable code and optimizing application performance. Known for a collaborative approach, effective communication, and a commitment to delivering high-quality software solutions within Agile frameworks.

TECHNICAL SKILLS

- Programming Languages - C, C++, Java, Python, JavaScript, HTML5, CSS3
- Frameworks & Libraries -
  Backend: Spring, Spring Boot, Spring MVC, Spring Security, Spring JPA, Spring Cloud, Hibernate, Rest Api, Spring Batch, JSON, XML, WebSocket, Microservices Architecture, JWT
  Frontend: Bootstrap, jQuery, AJAX, ReactJS
- Databases - MySQL, MongoDB, PostgreSQL, Elasticsearch, Oracle, DynamoDB
- Version Control - Git, GitHub, GitLab, Bitbucket
- Testing Tools - Junit, Mockito, Postman
- Build Tools - Maven, Gradle
- Microservices - Spring Cloud Gateway, Eureka Service Registry, Circuit Breaker (Resilience4j/Hystrix), RestTemplate, Feign Client, Retry Mechanism
- Cloud Services - AWS (EC2, S3, RDS, Lambda, CloudWatch, SQS, DynamoDB, Api Gateway), Google Cloud Platform (GCP)
- DevOps Tools - Docker, Jenkins, CI/CD Pipelines, Terraform
- Other Tools - Jira, Swagger, Apache Kafka, Apache Camel, Redis [SSL/TLS configuration], Prometheus, Grafana, Monitoring
- Operating System - Windows, Linux
- IDE's – IntelliJ Idea, Eclipse, Visual Studio Code

PROFESSIONAL EXPERIENCE

8Bit System Private Limited, Jaipur
Java Developer – Project: Hitachi Vantara July 2024 - Present

- Designed and implemented robust enterprise integration solutions using **Apache Camel** with **Spring Boot**, enabling seamless communication between microservices and legacy systems.
- Built and maintained CI/CD pipelines using **GitLab**, automating build, test, and deployment workflows to accelerate delivery cycles and reduce human error. Used Docker and Jenkins for containerization and continuous integration.
- Collaborated with backend developers to design and test APIs.
- Maintained and updated legacy Java applications, improving system stability.
- **Key Technologies**: Apache Camel, Spring Boot, OpenShift, Red Hat Enterprise Linux, GitLab CI/CD, REST APIs, Docker, Kubernetes, Maven

8Bit System Private Limited, Jaipur
Java Developer – Project: Maxlife Insurance Aug 2023 – July 2024

- Designed and implemented microservices using Spring Boot, increasing modularity and maintainability.
- Deployed containerized services with **Docker** on cloud infrastructure using **AWS ECS**, enabling high availability and auto-scaling capabilities.
- Used Docker and Jenkins for containerization and continuous integration.
- Integrated AWS services such as **S3, SQS, Lambda, DynamoDB, and RDS** to handle storage, messaging, compute, and data persistence.
- Collaborated with cross-functional teams (QA, DevOps, Product, UAT) in Agile sprints to deliver features on time and meet SLA requirements.
- Maintained and updated legacy Java applications, improving system stability.
- **Key Technologies:** Spring Boot, Microservices, AWS (ECS, S3, SQS, RDS, Lambda, DynamoDB, CloudWatch), Docker, GitLab CI/CD, REST APIs, Maven, JIRA, Agile, DynamoDB

8Bit System Private Limited, Jaipur
Java Developer – Project: CVE [Common Vulnerabilities and Exposures] Oct 2023 – Aug 2024

- Designed and implemented RESTful APIs using **Spring Boot** to expose and manage CVE (Common Vulnerabilities and Exposures) data for security analysis and reporting.
- Built a modular architecture to support **real-time querying and analytics** on large CVE datasets.
- Optimized system performance through asynchronous data processing and bulk indexing techniques in Elasticsearch.
- Configured Elasticsearch repositories for domain objects to support **CRUD operations and custom search queries**.
- **Key Technologies:** Spring Boot, Swagger Api Documentation, Spring Security, JWT Token, Rest Api, Maven, Postman, Mockito, Elasticsearch

8Bit System Private Limited, Jaipur

Java Developer – Project: Attendance Management System Mar 2022 – Oct 2023

- Built MVC-based web modules to handle form submissions, validations, and user workflows with seamless integration between frontend and backend layers.
- Implemented rich UI components using **Bootstrap**, **AJAX**, **jQuery**, **HTML**, and **CSS**, improving user experience and responsiveness across devices.
- Developed enterprise applications using both **Spring MVC** and **Spring Boot**, delivering scalable backend services and dynamic web interfaces.
- Integrated frontend with backend services, ensuring seamless data exchange and real-time updates using AJAX and RESTful communication.
- Created dynamic, responsive UI components using **Bootstrap**, **AJAX**, **jQuery**, **HTML5**, and **CSS3**, enhancing user experience across desktop and mobile platforms.
- **Key Technologies:** HTML, CSS, JavaScript, Ajax, Bootstrap, jQuery, Java, Spring MVC, Spring Security, OAuth2, JWT Token, MySQL

PROJECTS

E-Commerce Project

- The E-Commerce Website project aims to create a comprehensive online shopping platform that allows users to browse, search, and purchase a wide range of products. This project will focus on developing a user-friendly interface, robust backend infrastructure, and secure payment gateway to ensure a seamless shopping experience. The platform will cater to various product categories, including electronics, fashion, home goods, and more.
- Frontend Technology - HTML, CSS ,Bootstrap, jQuery, Ajax
- Backend Technology - Core Java, Advanced Java, Spring boot, Spring security, Spring MVC, Spring JPA, Rest Api, JSON
- Database - MySQL
- Tools - IntelliJ idea, Visual Studio, Eclipse, Postman

Authentication Microservice

- This is a Spring Boot-based authentication service that supports OAuth2, security, role-based access control (RBAC), and integration with a MySQL database. The service can be easily deployed using Docker and Docker Compose.
- OAuth2 Authentication: Supports OAuth2 for user authentication using third-party providers like Google, GitHub, etc.
- Security: Implements JWT (JSON Web Tokens) for securing API endpoints.
- Role-Based Access Control (RBAC): Allows assigning roles (e.g., ADMIN, USER) to users, with different levels of access to resources.
- User Registration & Login: Handles user registration, login, and token-based authentication.
- MySQL Integration: Uses MySQL for persistent storage of user data, roles, and authentication tokens.
- Dockerized Deployment: The service is containerized for easy deployment using Docker and Docker Compose.
- Technology – Spring Boot, Spring Security, MongoDB, Rest Api, JWT Token, OAuth2, Postman, Swagger Api Documentation, Junit Test, Mockito, Docker, Monitoring with Grafana

Kafka Setup & Streaming

- Set up a secure **Apache Kafka cluster** with **Zookeeper** for coordination and ensured secure communication using **SASL_SSL authentication**.
- Created Kafka topics with appropriate partitioning and replication for high availability.
- Published and consumed events across microservices using **Kafka producers and consumers**, ensuring data consistency and reliability.
- Developed and deployed real-time transaction streaming pipelines using **Spring Kafka** and **Kafka Streams API** to process and filter transactions (e.g., completed, failed, pending).

Banking Microservices System

- Developed a **Banking Microservices System** comprising five independent microservices: **User Service**, **Bank Account Service**, **Transaction Service**, **API Gateway**, and **Service Registry**. The system leverages **Spring Boot** for creating scalable and maintainable microservices and uses **Kafka** for real-time streaming of transactions, ensuring efficient communication and data consistency across services. Security: Implements JWT (JSON Web Tokens) for securing API endpoints.
- **Real-Time Transaction Processing:** Utilized **Kafka** for event-driven communication between services.
- **Service Discovery:** Enabled automatic service discovery using **Spring Cloud Eureka**.
- **API Gateway:** Centralized routing and security using **Spring Cloud Gateway**.
- **Resilience & Fault Tolerance:** Used **Resilience4j** for circuit breaking and fallback mechanisms.
- **Monitoring:** Integrated **Prometheus** and **Grafana** for real-time monitoring.
- Technology –Kafka Streaming, Spring Boot, MySQL, Rest Api, Postman , Monitoring with Grafana

EDUCATION

S.S. Jain Subodh P.G. College, Rambagh Circle, Jaipur **July ,2022 – June ,2024**
Master of Information Technology | Percentage: 77%

University of Rajasthan, Jaipur **July ,2018 – May ,2021**
Bachelor of Science (Mathematics) | Percentage: 66%

Vikash Public Senior Secondary School Kishangarh-Renwal, Jaipur **July ,2017 – April ,2018**
12th Board of Rajasthan | Percentage: 82%

Priyanka Vidhya Mandir Secondary School, Jaipur **July ,2014 – April ,2015**
10th Board of Rajasthan | Percentage: 72%

CORE SKILLS

- Object-Oriented Programming & System
- Computer Networking
- Database Management System
- Operating System

PERSONAL INFORMATION

- Father's Name - Mr. Shrawan Lal Kumawat
- Mother's Name -Mrs. Kiran Devi
- Date of Birth – 18-07-2000
- Gender – Male

Languages

- English
- Hindi
